Worcester Trial Court

225 Main Street
Worcester, Massachusetts 01605

Just over a mile from our headquarters in downtown Worcester, you will find the new Worcester Trial Court. Coghlin had the challenge of installing the expansive Voice & Data Cabling System, an intricate Security System and the impressive Audio Visual System at this \$180 million dollar, state of the art facility. Spanning an entire city block, the 427,000 square foot building will contain all five departments of the Commonwealth Trial Court under one roof. One key feature of this project is the technologically sophisticated digital & video evidence presentation system in the courtrooms.

Challenges:

- 3 Separate Systems; Telecommunications, Security and Audio Visual to be completed by the same installation group on a very limited budget

Solution:

- Assign a Lead Technician to Each One of the Systems
- Numerous On-Site Training Sessions for Each Installation
- Highly Skilled Technicians

Project Methodology

Coghlin Project Management was faced with the redesigning of the three systems to show cost savings and how to keep manpower as low as possible.

Project Management/Resources

This twenty-two month project was under the control of a single Project Manager, 3 Lead Foreman for each specialization and a professional team of technicians.
